

From Chaos to Clarity

How Lyman Steel Reclaimed **8+ Hours**
a Week with QuickBooks Automation

For years, Lyman Steel, a mid-sized steel distributor, struggled with a tedious, error-prone double data entry process. Every week, bookkeeping staff manually re-entered invoices in QuickBooks—data they had already entered in the ERP system—wasting time and effort and risking accuracy. The ERP system efficiently managed the full order-to-cash cycle but lacked key bookkeeping features like ACH transactions, direct deposits, and check processing—tasks QuickBooks excels at. This resulted in having this inefficiency being accepted as the “cost of doing business”—until costly mistakes made the price too high to ignore.

The Breaking Point

The leadership had some eye-opening realizations uncovering costly billing errors and payment delays - all caused by manual data entry errors

Time Wasted:

Several hours were spent each month investigating and correcting avoidable mistakes.

Quality Control Burden:

Staff was having to double check and triple-check records sometimes, adding more unnecessary time.

Operational Fatigue:

Leadership grew weary of constantly being in “hunt mode,” chasing down back-office inefficiencies.

A DATA SCIENCE COMPANY

The Turning Point: Automating QuickBooks Integration

After reviewing Lyman Steel's processes, eMoksha automated the invoice transfer from ERP to QuickBooks—eliminating manual input entirely.

With a seamless, fully automated solution, Lyman Steel achieved:

Double Data Entry Eliminated:

100% of manual invoice entry was eliminated to Quickbooks.

Efficiency:

8+ hours per week were freed for other bookkeeper tasks.

Accuracy:

Error rates dropped to nearly zero.

Speed:

Financial reports that took days were now generated in minutes.

At eMoksha, we focus on developing custom solutions for steel distributors. From streamlining operational processes with customized software solutions to hunting for patterns in data to discover new opportunities, our solutions help steel distributors eliminate inefficiencies and focus on scalability and smarter decision-making.
